1. Product description	3
2. Certificate activation	3
Data verification step	4
Domain verification step	9
Certificate activation step	11

1. Product description

An SSL (TLS) certificate is a type of certificate used in security protocols to certify the authenticity of a domain and its owner. It encrypts and secures website traffic, including the transmission of confidential data that customers enter on your website. Thanks to the SSL certificate, your customers' personal data, logins and passwords, credit card numbers and other data will be secured.

2. Certificate activation

As the Certum **customer**, you will be able to start the activation process of your certificate in the store at **My account** in the **Data security products** tab.

As the **partner**, you start the process through partner panel from the **Dashboard** by choosing the product you want to order.

The process of issuing the certificate consists of several steps:

- **Data verification** – providing the subscriber and organization's data and the verification
- **Domain verification** – providing the domains and the verification
- **Certificate activation** – key pair generation, choosing the fields to include in the certificate and submit to issue.

As the activation process goes, each step will go through the next statuses:

Step is
awaiting for
the data

Data is saved
and ale waiting
for verification

Verification
was successful

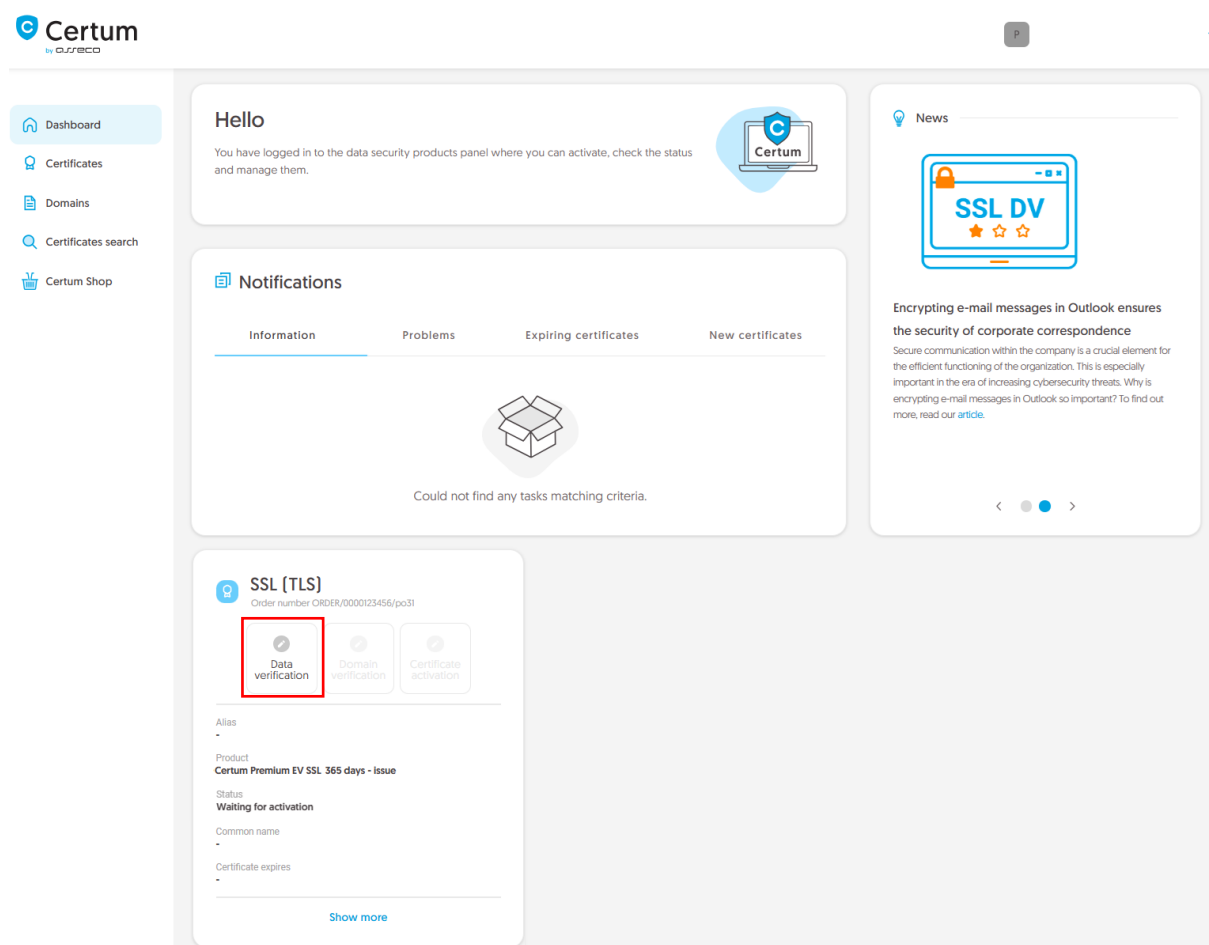

Providing the
data is not
available yet

Data verification step

Providing data to be verified is the step in which you provide the data of the organization for which the certificate will be issued, the data of the subscriber (the person who represents the organization and will be the owner of the certificate) and the data of the subscriber's authorization to represent the organization. From the data provided here, it will be possible to select data for the certificate in the last step of certificate activation.

The list of supported verification documents you can check at [Information about required documents](#).

As the Certum **customer**, you will be able to start the data verification step from **Dashboard**, using **Data verification** option:

or from the **Certificates** list – choose the certificate you want to activate and use **Provide the data** option in the subscriber's data section:

As the **partner**, you will be able to start the data verification step from **Dashboard**, using new order option. After choosing the product type and providing the order details, you will be able to provide the data used in the first step of issuing the certificate.

The wizard will guide you through the process of providing the data. In the first stage, choose to provide new data. In the future, it will be possible to use them to issue another certificate.

In the next stage, provide the details of the subscriber, which means the person who represents the organization and will be the owner of the certificate. Please write the names and surnames in the form as they appear on the subscriber's identity document.

Also choose a method for verifying the subscriber's identity from the available ones:

- **Automatic identity verification** – the subscriber will receive an e-mail with a link to the identity verification service to use with a computer or phone camera and an ID document
- **Attaching a document** – you will add a scan of the subscriber's identity document or an identity confirmation.

Subscriber Organization Authorization Summary

Subscriber data

The subscriber is a person who will be the owner of the certificate: the data of him or her or organization that he or she can represent will be available to include in the certificate. After completing this step, subscriber will be asked to verify his/her identity with an **identity document** using one of the available verification methods.

NAME*

Joe

SURNAME*

Doe

Verification method

☒ Automatic identity verification ☐ Add the document to verify subscriber's identity

E-MAIL ADDRESS OF THE SUBSCRIBER*

joedoe@ourcompany.com

In the case of **automatic identity verification**, the subscriber will receive a link and instructions to start the process to this e-mail address. The link will be sent after saving the data to be verified.

[Back](#) [Next](#)

After providing the subscriber's data, go to the next stage: providing the organization's data. Here, provide the organization's details, the address of its headquarters and the city, state and country of the registration authority where the organization's legal existence was established. The data will be used to verify the existence of the organization.

Choose also how Certum will verify the existence of the organization:

- **By registration number** – Certum will search for information about the organization in the public register using the provided number
- **Attaching a document** – you will add a document confirming the establishment of the organization.

Subscriber Organization Authorization Summary

Organization data

Provide the data to let us verify your organization existence. From this data you will be able to choose the fields to include in the certificate.

The data of the organization

ORGANIZATION*

Your company

BUSINESS CATEGORY*

Private Organization

REGISTRATION NUMBER*

12345678

Headquarters of the organization

COUNTRY*

Poland [PL]

STATE OR PROVINCE*

mazowieckie

LOCALITY*

Warsaw

After providing all the required organization's data, proceed to the last stage of providing data for verification step, which is choosing the method of verifying the subscriber's authorization to represent the organization.

There are two methods to choose from:

- **The subscriber is visible in the registry** – the person given as the subscriber appears in one of the given registers as a representative of the organization
- **Attaching a document** – you will add a document confirming authorization. You can download an example of such document by the **Download ready to sign authorization document** link.

The method of verifying the subscriber's authorization is also influenced by the organization's chosen verification method. If the registration number and its type have been provided there, Certum will first check whether the subscriber is listed in the register and the system will automatically mark the method of verifying the subscriber's authorization as **The subscriber is visible in the registry**. However, this does not prevent you from adding a document confirming the subscriber's authorization.

The screenshot shows the Certum by CURECO web interface. On the left is a sidebar with navigation links: Dashboard, Certificates, Domains, Certificates search, and Certum Shop. The main content area displays a progress bar with four steps: Subscriber, Organization, Authorization (highlighted with a blue circle and the number 3), and Summary. Below the progress bar is a form titled 'Authorization data' with the instruction: 'Choose the verification method to confirm the subscriber's relationship with the organization.'

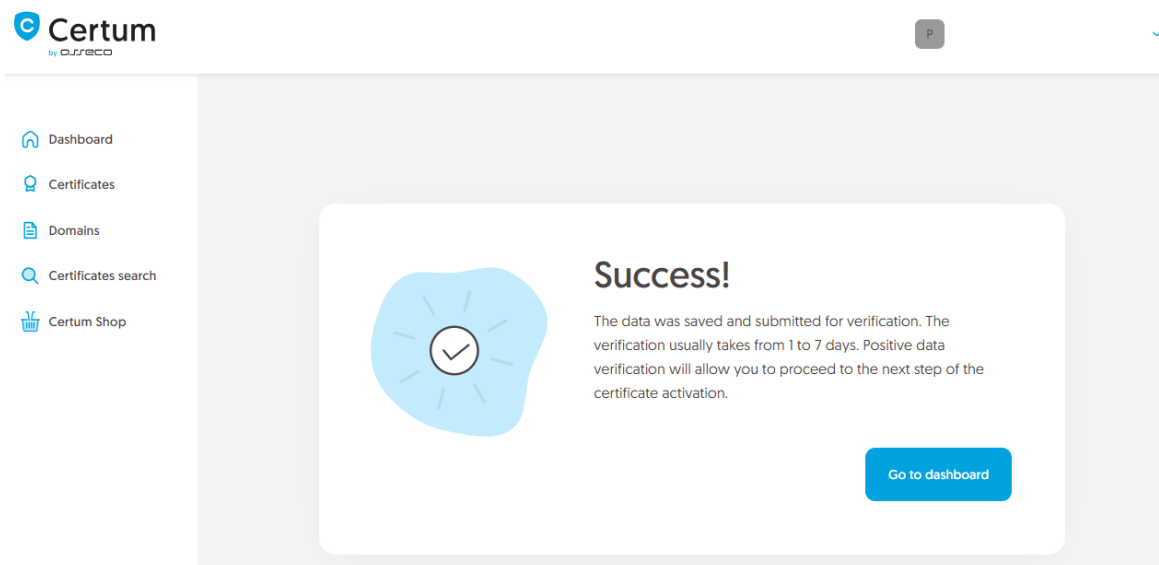

The form contains the following sections:

- Subscriber data:**
 - Name: Joe
 - Surname: Doe
- Verification method:**
 - ☒ Subscriber is visible in DUNS, LEI or other registry as organization's representative
 - ☐ Add the document to verify subscriber's relationship with the organization
- Chosen registry type:**
 - DUNS
 - 12345678

At the bottom of the form are two buttons: 'Back' (a blue text link) and 'Next' (a blue button).

After selecting the authorization verification method and proceeding, verify provided information on the summary screen. If the data is correct, mark the statements if required and complete the step of providing data to be verified.

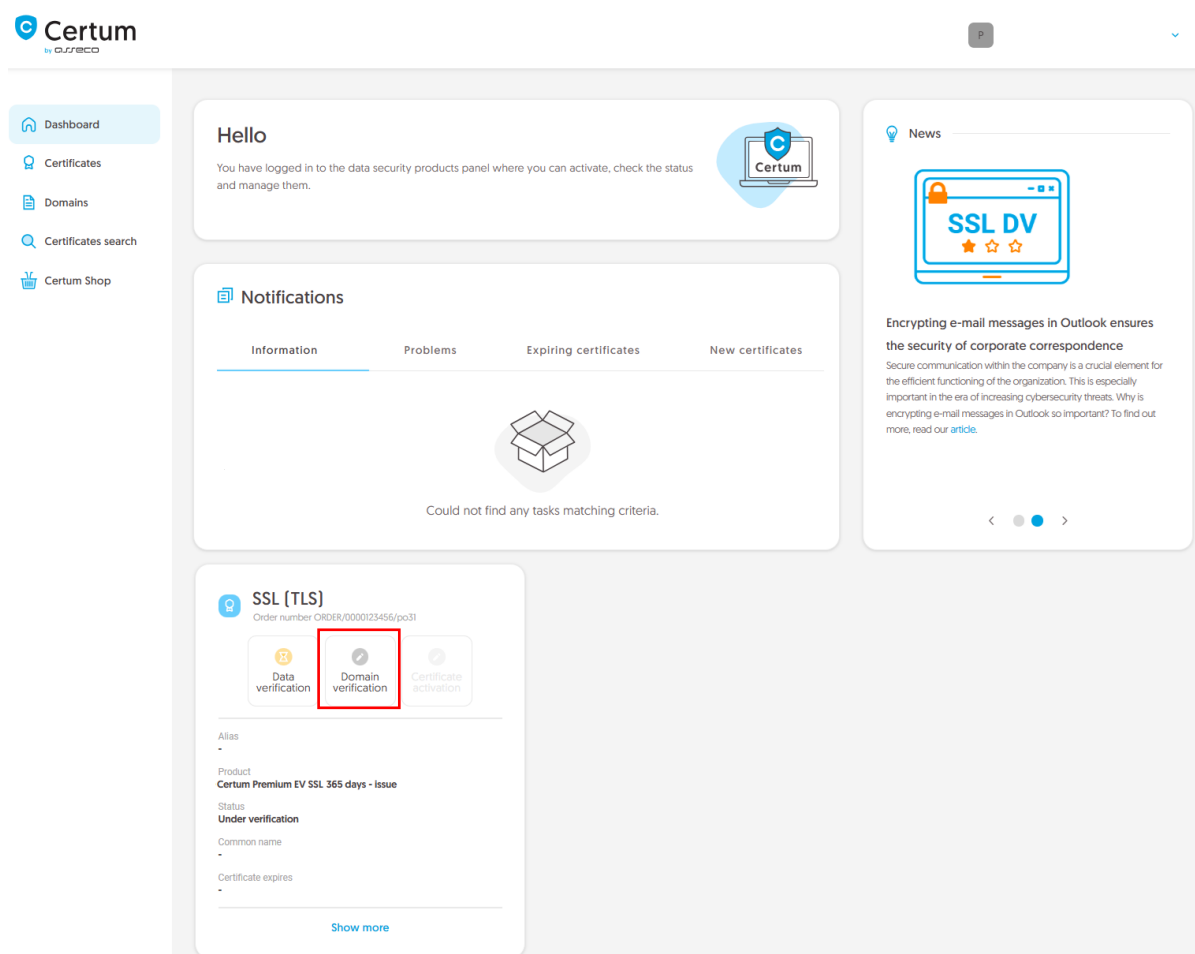

The success screen will inform you that the data have been saved for verification. Certum will verify it. During this time, if you want to add another document confirming the provided data, you can add it in the certificate details. This is also the time to perform automatic verification of the subscriber's identity, if such verification method has been chosen. You may check the [instruction for automatic identity verification](#).

When the data to be verified is saved, you can proceed to the next step which is providing the domains.

Domain verification step

You will be able to start the domain verification step from **Dashboard**, using **Domain verification** option:

or similar to the **Data verification** step: from the **Certificates** list – choose the certificate you want to activate and use **Provide domains** option.

In this step, you will provide the domains to be included in the certificate.

Provide the new domains to the list using **Add domain** tab:

The screenshot shows the Certum interface for adding domains. The left sidebar contains links to Dashboard, Certificates, Domains, Certificates search, and Certum Shop. The main area is titled 'The domain list' and includes instructions: 'Provide the domains that will be included in the certificate. If you wish to add their www subdomains to the certificate, choose the option to add them. Verification of the control over the domains will be required using verification method selected below.' Below this, there are three tabs: 'Verified domains', 'Add domain' (highlighted with a red box), and 'Add a list of domains'. The 'Add domain' tab contains a text input field with 'yourdomain.cc' and a yellow 'Add domain' button. A blue arrow points from the button to the 'Selected domains' panel on the right. This panel shows 'Domains to secure (1 / 1)' with a '+ 0 www subdomains' button. Below is a table with columns 'DOMAIN NAME' and 'VALID UNTIL'. The first row shows 'yourdomain.com' with 'verification required' and a trash icon. At the bottom, there is a toggle switch labeled 'add www. subdomains to the list'.

or choose verified earlier domains from **Verified domains** tab:

The screenshot shows the 'Verified domains' tab selected. The instructions are: 'Choose verified or provide new domains, that will be included in the certificate. If you wish to add their www subdomains to the certificate, choose the option to add them. For not verified domains, verification of the control over them will be required using verification method selected below.' The tabs are 'Verified domains' (active), 'Add domain', and 'Add a list of domains'. Below the tabs is a 'Select all domains' link. A table lists verified domains with columns 'DOMAIN NAME', 'VERIFICATION STATE', and 'VERIFICATION VALID UNTIL'. The first row shows 'yourdomain.com' with a green checkmark and the date '2025-01-24 10:24'. The right sidebar is identical to the previous screenshot, showing 'Domains to secure (0 / 1)' and the 'add www. subdomains to the list' toggle.

If you have a list of domains in a text file, you can paste its content on the **Add a list of domains** tab. More about domain verification before starting the certificate activation process you can check in [domain management instruction](#) (this option is currently available only for **customers**).

If you want to add a www subdomain to a given domain in the certificate, provide it to the list or use the **add www. subdomains to the list** switch.

At this stage, if the domain requires verification, choose the method to verify that you have control over the domains and if you wish, provide the e-mail address of the person who will receive the domain verification code. If you need help with choosing a domain verification method, please check supported [verification methods](#).

After providing the domains, choosing their verification method and proceeding, check provided data on the summary screen. If the data is correct, complete the domain verification step.

The success screen will inform you that your domains have been saved. Verify them using chosen earlier verification method or if the data to be verified and the domains are both already verified, proceed to the last step, which is **Certificate activation**.

Certificate activation step

You will be able to start certificate activation step from **Dashboard**, using **Certificate activation** option or similar to the previous step: from the **Certificates** list – choose the certificate you want to activate and use **Activate certificate** option.

In this step you will choose the Common name of the certificate and generate a key pair.

Choose which of the domains you want to set as the Common name of the certificate (if more than one domain is provided) and the fields for the certificate. Some fields are required and cannot be unmarked.

1
Certificate data Generation method Key pair generation Summary

Certificate data

Choose the data to be included in the certificate. Some of the fields are mandatory and there is no option to uncheck them.

Certum Premium EV SSL 365 days - issue

☒ Common name:
yourdomain.com

☒ Organization (O):
Your company

☒ Locality (L):
Warszawa

Once you have chosen the Common name and the fields for the certificate, go to the key pair generation.

For SSL certificates, the available key generation method is CSR which means pasting a certificate signing request generated by a generator, e.g. [Certum Tools](#), or by the application/server where the certificate will be installed.

[Download Certum Tools app](#)

[Back](#) [Next](#)

Remember to save the private key if you generated a CSR using the generator. You will need it to install the certificate once it is issued.

Providing the correct CSR and proceeding will display the summary screen. Check all of provided data. Mark the required statements if needed and complete certificate activation.

The success screen will inform you that the certificate has been submitted for issuance. Certum will finally verify the data in the certificate and after positive verification, will issue it. The issued certificate can be downloaded from the certificate creation e-mail or from the certificate details view: in a convenient **PEM** or **DER** encoding.

From the certificate details view you can also download subordinate certificates for the certificate.

If you need a PFX file, you can use the [Certum Tools](#) generator.
